TotalControlPro™

Manufacturing Platform

Activate each module as required, address immediate problems, solve immediate needs.

Energise our professional services, apply best practice to get the best results.

Synchronise connecting modules for live visibility of real-time processes from shop-floor to top-floor.

Inventory Module

Receive automatic notifications of stock availability at point of order.

Integrate with the shop-floor booking in and dispatch functionality to confidently track and trace the products.

Manage product lifecycle and attributes including images, design drawings, product QR codes etc.

Maintain stock visibility, gain live access to stock levels, costs, tracking information and much more using our Inventory Module. This module is designed to track all inventory items, manage bill-of-materials and attach item specific information. This enables the automatic creation of supplier and purchase orders as required. Our Inventory Module provides real-time, instant intelligence. No more wasted hours on delayed sales orders due to stock uncertainty or repeat stock takes.

Our software is fully adaptable, as the Inventory Module can optimise stock and manufactured goods when Synchronised with the MES.

This module used with dispatch station interface and the MES will give you end-to-end process visiblity.
